MARBLE FINISHES

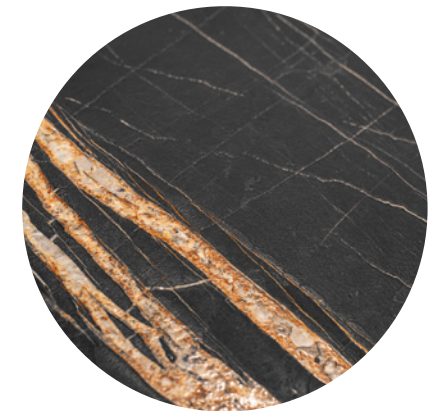

Honing makes the surface smooth and flat and gives the material a matt and somewhat used appearance. The tones of the colouring are therefore softened and almost dimmed.

Brushing finish is obtained using tools equipped with abrasive brushes; this technique confers an orange-peel appearance, with a slightly wavy texture evocative of silk.

Polishing exalts the colour, the veining or the intrinsic characteristics of every type of marble, taking it to the maximum intensity and brilliance.

With **Ipogeo® Origo** finish marble is transformed and shaped like clay. Different colour ranges and veins are given prominence in order to offer sensory stimulation.

Our furniture is made exclusively of Croatian FSC® certified solid wood that has been carefully selected and coated with special finishes in order to obtain its best look and quality.

Our solid wood furniture is made of many pieces of wood. Each has its own unique grain pattern and you may notice slight natural variations and surface character that makes solid wood one of a kind. These natural characteristics are proof that you are enjoying an authentic item, and not an artificial wood imitation.

All solid hardwoods expand and contract with changes in relative humidity. When cared for properly, solid wood furniture will give you a lifetime of enjoyment.
